More than 7,500 C152s have been produced, with various options and modifications being introduced by the factory and added by owners over the years.. I would only recommend this aircraft to people that intend to simulate, train, and fly in virtual and real C152s.

The included manual only includes references and checklists - no instructions The add-on itself works and it is realistic, so I must give it an unenthusiastic thumb up.. For the sale price, I was not disappointed Handling is as expected However the aircraft is very bare bones: only two radio stacks and no frequency swapping, ILS is only for left/right, the GPS is a Garmin 295 (at least it has a GPS!), and there is no autopilot - not even hitting Z works.. In summary, if you enjoy the old-school Cessnas, you'll love this DLC Awesome As mentioned above - if you're having a fuel issue where you're only using one tank, either left or right, it's almost certainly because you loaded this aircraft AFTER starting the sim into another aircraft with the selector not set to BOTH.

I flew this type in while studying as a student pilot The plane flies just as the real one did.. With the pull to the left my flight involved a lot of right turns to keep my aircraft from veering off course.. I highly recommend it OWN THIS!!!(As promised, I have edited my review since I was able to figure out a fuel issue I was having -if you're having a fuel issue, read the bottom - it's NOT the DLC!)What I love about this: the sound and details.. FeaturesFour coloured liveries Window reflectionsFull 3D pilot figure with animationsFull propeller effectsModelled details including pitot pressure chamber, antennas, wheel chocks, fuel caps, baggage areaAnimations include: ailerons, elevators, rudders, flaps, trim tab, rotating wheels, operating doors, animated sun visors, operating door windows, glove compartment, fresh air outlets, vibrating radio antenna, opening ashtray, and the co-pilot seat back also tilts forward. If you're familiar with the process, the cfg file is easy to edit if you need to change the avionics to represent any 152 II that you'd like (I needed a NAV/COM stack with standby and slightly newer transponder).. A lot of real 152s don't have autopilot anyway, but if you want a relaxing flight from Point A to Point B and enjoy the view this aircraft won't give you that because it demands a lot of trimming and attention.. The C152 II variant includes an enhanced standard avionics and navigation package.. I am very happy with this plane The details are spot on and everything is just as I remember about the 152. If a 152 II is/was in your past, present or future, you definitely should buy this, because everything about it is stunning.. The view from the virtual cockpit is tinted and unfortunately there are no options to change it to a non-tinted view.. I bought this because I'm training right now and it looks like I'll be soloing in this exact model soon, so I wanted to be familiar (even the interior is nearly exact to the one picture I took!)..
